Internet translation processing system has translation server which receives called uniform resource locator data from server and translates same corresponding to request of user

NEC CORP 1999.11.12 1999JP-323243

(2001.05.25) G06F 17/28, G06F 13/00, 17/30

Novelty: A translation operation request program (4) acquires URL data to be translated from a user terminal (1) when user terminal accesses translation server and sends translation request. Acquired URL data is transmitted to WWW server (3) which searches and calls corresponding URL data. The called URL data is transmitted to translation server to translate URL data and is transmitted to browser of terminal (1).

Detailed Description: An INDEPENDENT CLAIM is also included for internet translation processing method.

Use: Internet translation processing system.

Advantage: Translation server apparatus acquires data and translates it automatically to browser of user terminal. User terminal obtains translation result easily by accessing translation server.

Description of Drawing(s): The figure shows the internal block diagram of translation server. (Drawing includes non-English language text).
